

student name : omar musbah salem omar alsnini.

student id : 250418358.

lesson name and number :User Interface Programming-SEN10.

Introduction:

Title of the project: smart store.

Research Question: How can we make the training of an artificial neural network easy by using an interface using pyqt?

Objective of the project:

The project aims to enable the users to

Train their data without coding .

Expected outcome:

The program will handle any dataset with binary output csv type It has a format like hr.csv

Methodology:

in the main window will appear several buttons each one doing a specific function → upload csv

→ clean data → choose activation function →

Train→download module then will show the result in the layout section.

Flow chart:

While true:

input csv

if not empty:

dataclean

Train modul()

Download modul()
